ANIMAL-ASSISTED THERAPY (AAT) FACT SHEET
(Pet-Assisted Therapy)

What is Animal-Assisted Therapy? Animal-Assisted Therapy is a therapeutic tool that utilizes animals as catalysts to meet specific goals. The professional who delivers or directs AAT is a health/human service provider with expertise in integrating animals as a treatment modality, and is knowledgeable about animals and behavior. The AAT Specialist is licensed and/or recognized by a separate professional discipline. This individual complies with the legal and ethical requirements of his/her profession; as well as local, state and federal laws relating to this work.

Who can benefit? Animal-Assisted Therapy benefits a wide spectrum of populations, including individual’s physical, physiological and psychological issues.

WHAT ARE THE BENEFITS OF AAT?

**Physiological:**
- Animals can contribute to the patient's recovery from an illness.
- The presence of animals has been found to lower blood pressure.
- Caring for animals may increase a person's self-care skills.

**Psychological, Therapeutic and Social:**
- Engaging the client in conversation
- Building rapport and trust
- Good for emotional well-being
- Aids the therapists in treatment objectives with the client: Tasks, Goals, Responsibilities.
- Motivational factors enhance cognitive behavioral change and task completion.
- Socializing: the animal is a catalyst helping to break down barriers of communications.
- Self-management and monitoring of emotional and behavioral changes by client and therapist through writing, drawing, observations of verbal and non-verbal language.
- Sparks the spirit of cooperation and interaction
- Social Phobias
- Overcome fear
- Unconditional positive regard and companionship
- A reason for living – being needed
